

Credit Name: CSE 2140 2nd Language Programming

Assignment Name: Mastery Exercise 14 - Election

### Error Log Entry

What error message did you encounter (if any)?

What unexpected behavior did your program exhibit?

There was no unexpected behaviour its just that I didn't know what to output because it says 2 differents things. (The physical copy & online textbook.) So me an AI kept on going back and forward on that.

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)    My brain wasn't functioning right. I was double thinking myself

Include a screenshot of specific lines of code.

How did you fix the issue?    I asked the teacher

Provide the corrected code or solution using a screenshot.
